

# Planning Scheme Major Amendment 2

## Stock route management overlay

### What is the Stock route management overlay?

The Stock route management overlay identifies stock routes and provides additional measures to ensure that the stock route network is maintained.

Council's Stock route management overlay advances the State Planning Policy state interest for Agriculture.

The overlay map shows stock routes as determined by the Queensland Government and incorporates a 75-metre buffer area:

The overlay code has measures to:

- ensure that where stock routes are over private land, they are protected
- minimise interface between development and the stock routes
- provide buffers to sensitive land uses

The Stock route management overlay code only applies to development within the Rural zone, even where stock routes pass through urban and township areas.

### What changes have been proposed?

The Stock route management overlay map has been updated to:

- incorporate the latest Stock Route mapping from the Queensland Government
- separate the 75m buffer area from the stock route.

There are no changes to the measures within the Stock route management overlay code.

### Where can I find these changes?

- Table 5.9.13—Stock route management overlay
- Section 7.2.13 Stock route management overlay code
